

**GUIDELINES FOR THE SAFE STORAGE, USE AND DISPOSAL OF DRY ICE SLICES**

**WHY DOES MY CAKE ORDER CONTAIN DRY ICE?**

Dry Ice has been placed within your consignment to ensure your Food Order remains at the correct temperature during transit and reaches you in the best possible condition. Dry Ice is used for transit purposes only and no attempt should be made to collect and store it for other reasons. Once your order has been unpacked the Dry Ice should be immediately disposed of as indicated below.

**WHAT IS DRY ICE ?**

Dry Ice is solid carbon dioxide at minus 78C. Because Dry Ice is very cold and also has bacteriostatic properties, it is often used to help preserve perishable food products during transit. As Dry Ice warms it will change from solid to carbon dioxide gas (it sublimates) that is heavier than air and does not leave any melted residue. Carbon dioxide as solid and gas is odourless, tasteless and non-toxic. Dry Ice is an environmentally friendly material and has been manufactured from recovered carbon dioxide

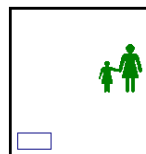

**HANDLING DRY ICE**

Dry Ice will sublime into the atmosphere generating gaseous CO<sub>2</sub>.

**REMEMBER** – a little bit of Dry Ice will sublime to a large volume of CO<sub>2</sub> gas.  
**ALWAYS** Follow the instructions below when handling Dry Ice.

**DO NOT** handle dry ice with bare hands. It can cause severe cold burns and frostbite.

**DO NOT** play with dry ice. Playing games with dry ice is dangerous.

**ALWAYS** keep Dry Ice away from children.

**USE THE INSULATED CONTAINER TO STORE THE DRY ICE**

**DO NOT PLACE IN WORKING REFRIGERATOR OR FREEZER**

**WHAT SAFETY CONSIDERATIONS SHOULD I TAKE WHEN DISPOSING OF DRY ICE?**

If any Dry Ice remains in the transit packaging then remove your order with care. Dry Ice will convert to harmless carbon dioxide but it is important to note that it is very cold and a single piece of Dry Ice will give off 500 times its own volume in gas. Therefore:

**ALWAYS** dispose of Dry Ice carefully in your outside bin.

**ALWAYS** ensure there is adequate ventilation for the carbon dioxide to disperse (outside).

**ALWAYS** ensure that Dry Ice packs are disposed of in a safe place secured against access to passers-by, particularly children and animals.

**ALWAYS** dispose of under conditions where the low temperature will not present a hazard or problem.

**PACKAGING DISPOSAL**

Any left over packaging should be disposed of responsibly and recycled wherever possible

## **IMPORTANT NOTICE:**

- Before you enjoy this wonderful cake, please take time to read the instructions below.
- **Before defrosting please remove the paper packaging, collar and wrapping from around the cake.**
- **Return the cake to the box and defrost in the fridge for 8 hours.**
